in conjunction with the Institute for Continuing Education presents:

**A Master Class with Dolores Mosquera, MA**

***First-time presentation in the United States!***

***How to Move Safely from Stabilization to Processing Traumatic  
Memories When Working with Dissociative Disorders:  
Micro-Processing Procedures Using EMDR Therapy (3.5CE)\*  
(Limited to 30 people)***

**Sunday, April 15, 2018**

**9 am – 1 pm**

**Watertown Center for Healing Arts**

**17 Spring Street, Watertown, Massachusetts 02472**

***Register at [www.nesttd-online.org](http://www.nesttd-online.org)***

**Dolores Mosquera** is a psychologist and psychotherapist specializing in severe and complex trauma, personality disorders, and dissociation. Dolores is the director of the Institute for the Study of Trauma and Personality Disorders (INTRA-TP) in A Coruña, Spain—a 3-clinic private institution initially founded in 2000 as LOGPSIC. She collaborates with two different Domestic Violence Programs, one focused on Women Victims of DV and another one on Males with Violent Behavior. She belongs to the Spanish National Network for the Assistance of Victims of Terrorism, and also collaborates with an organization aiding victims of emergencies, accidents, violent attacks, kidnapping and other traumatic incidents.

Dolores has extensive teaching experience leading seminars, workshops, and lectures both nationally and internationally. She has published numerous books and articles on personality disorders, complex trauma, and dissociation, and is a recognized expert in this field. She also teaches in several universities, and collaborates supervising Clinical Psychologists in postgraduate training programs from all over Spain.

**About the program:** Phase oriented treatment serves as an excellent guide to structure the work with clients suffering from dissociative disorders. Many trauma therapists struggle when it comes to deciding on how to proceed with trauma work, since some cases never seem stable enough. A progressive approach in working with traumatic memories may be implemented safely; the key is identifying possible indicators in each client. This workshop will illustrate specific micro-processing techniques that both increase client stabilization and allow for working with parts of the traumatic memories.

*\*Eligible for 4 EMDRIA credits. Registrants must have completed EMDRIA-approved Level 1 or 2 training.*

*Cancellation Policy for events: No refund is given if cancellation request is received within 1 week of event date. Prior to 1 week of event date, a full refund will be made*
